Course: CS220 Operating Systems Instructor: Dr. Nauman

Q. No.:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	Sum	Sign
Scored:																				
Total:	3	3	3	1	1	2	2	2	2	1	2	4	3	1	3	2	2	1		

Read all these instructions carefully:

- As instructed before, any plagiarism will instantly result in a 0 score for the whole paper. It does not matter if you copied something or someone else copied from you. There is zero tolerance on this.
- You may refer to your notes, books or even the internet but you have to use your own words to answer the questions. You cannot copy verbatim – that would fall under the category of plagiarism.
- Think about the question before answering. You have a lot of time to solve the paper but every question would require time to see what the examiner wants. Do not rush.
- If you have a printer at home, you can take a print of the sheets and write (by hand) in the provided space.
- If not, you can write on a plain A4-sized paper and number your answers correctly. However, **you may only use the space allocated for each question.**
- For instance, if there are 4-blank lines below the question in the exam paper, only write 4 lines for your answer. Writing more than that would most likely cause you to lose points.
- Use a proper scanning app to scan your answers. You have had instructions as well as ample time to prepare for this so there should be no excuse for poor scans.
- If your answer is not legible (either due to extremely poor writing or due to a bad scan), your score will suffer.
- When you are done reading these instructions, submit a 'Yes' as the answer to this task in the classroom to get 2-points.
